## VISION AND MISSION OF THE INSTITUTE

## Vision:

"Empowering human values and advanced technical education to navigate and address global

challenges with excellence."

## Mission:

- M1: Seamlessly integrate human values with advanced technical education.
- M2: Supporting the cultivation of a new generation of innovators who are not only

skilled but also ethically responsible.

• M3: Inspire global citizens who are equipped to create positive and sustainable impact, driving progress towards a more inclusive and harmonious world.

## VISION AND MISSION OF THE DEPARTMENT

## Vision:

"Steering the future of computer science through innovative advancements, fostering ethical values and principles through technical education."

## **Mission:**

M1: Directing future innovations in computer science through revolutionary progress.

M2: Instilling a foundation of ethical values and principles in every technologist.

**M3:** Offering a comprehensive technical education to equip individuals for a meaningful and influential future.

## **PROGRAMME EDUCATIONAL OBJECTIVES (PEOS)**

**PEO1:** Apply the technical competence in Computer Science and Engineering for solving problems in the real world.

**PEO2:** Carry out research and develop solutions on problems of social applications.

**PEO3:** Work in a corporate environment, demonstrating team skills, work morals, flexibility and lifelong learning.

#### **PROGRAMME OUTCOMES (POs)**

PO1: Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2: Problem analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3: Design/development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4: Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO5: Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PO6: The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PO7: Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PO8: Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

PO9: Individual and team work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO10: Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PO11: Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

PO12: Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

## **PROGRAM SPECIFIC OUTCOMES (PSOs)**

**PSO1:** Exhibit design and programming skills to develop and mechanize business solutions using revolutionary technologies.

**PSO2:** Learn strong theoretical foundation leading to brilliance and enthusiasm towards research, to provide well-designed solutions to complicated problems.

**PSO3:** Work effectively with diverse Engineering fields as a team to design, build and develop system applications.

## UNIVERSITY SYLLABUS

1. The probability that it is Friday and that a student is absent is 3 %. Since there are 5 school days in a week, the probability that it is Friday is 20 %. What is theprobability that a student is absent given that today is Friday? Apply Baye's rule in python to get the result. (Ans: 15%)

IT J J I I I J I J I I J I I J I I J I I J I I J I I J I I J I I J I I J I

- 2. Extract the data from database using python
- 3. Implement k-nearest neighbours classification using python
- 4. Implement linear regression using python
- 5.Implement K-Means\_Clustering using python
- 6. Implement Naive Bayes Theorem to Classify the English Text using python
- 7. Implement an algorithm to demonstrate the significance of Genetic Algorithm in python
- 8. Implement an algorithm to demonstrate Back Propagation Algorithm in python
- 9. Implementing FIND-S algorithm using python
- 10. Implementing Candidate Elimination algorithm using python

## COURSE OUTCOMES (COs)

Upon successful completion of the course, the students will:

- 1. To learn the basic concepts of machine learning and types of machine learning.
- 2. To design and analyze various machine learning algorithms and techniques with

a modern outlook focusing on recent advances.

3. Explore supervised and unsupervised learning paradigms of machine learning.

#### **CO-PO Mapping:**

	PSO1	PSO2	PSO3	PSO4	PSO5	PSO6	PSO7	PSO8	PSO9	PSO10	PSO11	PSO12
C412.1	3	3	2	2	2	1	-	1	-	1	1	3
C412.2	3	3	3	2	3	1	-	1	-	1	1	3
C412.3	3	3	2	1	2	1	-	1	-	1	1	3

## **CO-PSO Mapping:**

	PSO1	PSO2	PSO3
C412.1	3	2	1
C412.2	3	3	2
C412.3	3	2	3

## **COURSE OVERVIEW**

Machine Learning (ML) is basically that field of computer science with the help of which computer systems can provide sense to data in much the same way as human beings do. In simple words, ML is a type of artificial intelligence that extract patterns out of raw data by using an algorithm or method. The key focus of ML is to allow computer systems to learn from experience without being explicitly programmed or human intervention.

## DOs and DON'Ts

#### DOs

- 1. Login-on with your username and password.
- 2. Log off the Computer every time when you leave the Lab.
- 3. Arrange your chair properly when you are leaving the lab.
- 4. Put your bags in the designated area.
- 5. Ask permission to print.

#### **DON'Ts**

- 1. Do not share your username and password.
- 2. Do not remove or disconnect cables or hardware parts.
- 3. Do not personalize the computer setting.
- 4. Do not run programs that continue to execute after you log off.
- 5. Do not download or install any programs, games or music on computer in Lab.
- 6. Personal Internet use chat room for Instant Messaging (IM) and Sites is strictly prohibited.
- 7. No Internet gaming activities allowed.
- 8. Tea, Coffee, Water & Eatables are not allowed in the Computer Lab.

## **GENERAL SAFETY PRECAUTIONS**

#### **Precautions (In case of Injury or Electric Shock)**

1. To break the victim with live electric source, use an insulator such as fire wood or plastic to break the contact. Do not touch the victim with bare hands to avoid the risk of electrifying yourself.

2. Unplug the risk of faulty equipment. If main circuit breaker is accessible, turn the circuit off.

3. If the victim is unconscious, start resuscitation immediately, use your hands to press the chest in and out to continue breathing function. Use mouth-to-mouth resuscitation if necessary.

4. Immediately call medical emergency and security. Remember! Time is critical; be best.

#### **Precautions (In case of Fire)**

1. Turn the equipment off. If power switch is not immediately accessible, take plug off.

2. If fire continues, try to curb the fire, if possible, by using the fire extinguisher or by covering it with a heavy cloth if possible isolate the burning equipment from the other surrounding equipment.

3. Sound the fire alarm by activating the nearest alarm switch located in the hallway.

**4.** Call security and emergency department immediately:

**Emergency : 200 (Reception)** 

Security : 248 (Gate No.1)

## **GUIDELINES TO STUDENTS FOR REPORT PREPARATION**

All students are required to maintain a record of the experiments conducted by them. Guidelines for its preparation are as follows:-

1) All files must contain a title page followed by an index page. *The files will not be signed* 

#### by the faculty without an entry in the index page.

2) Student's Name, Roll number and date of conduction of experiment must be written on all pages.

- 3) For each experiment, the record must contain the following
- (i) Aim/Objective of the experiment
- (ii) Pre-experiment work (as given by the faculty)
- (iii) Lab assignment questions and their solutions
- (iv) Test Cases (if applicable to the course)
- (v) Results/ output

#### Note:

- 1. Students must bring their lab record along with them whenever they come for the lab.
- 2. Students must ensure that their lab record is regularly evaluated.

## LAB ASSESSMENT CRITERIA

An estimated 10 lab classes are conducted in a semester for each lab course. These lab classes are assessed continuously. Each lab experiment is evaluated based on 5 assessment criteria as shown in following table. Assessed performance in each experiment is used to compute CO attainment as well as internal marks in the lab course.

Grading	Exemplary (4)	Competent (3)	Needs	Poor (1)
Criteria			Improvement (2)	
AC1:	Complete	Underlined	Not able to write	Underlined

## LAB EXPERIMENT 1

## **OBJECTIVE:**

The probability that it is Friday and that a student is absent is 3 %. Since there are 5 school days in a week, the

probability that it is Friday is 20 %. What is the probability that a student is absent given that today is Friday?

Apply Baye's rule in python to get the result. (Ans: 15%)

## **ALGORITHM:**

Step 1: Calculate probability for each word in a text and filter the words which have a probability less than threshold

probability. Words with probability less than threshold probability are irrelevant.

Step 2: Then for each word in the dictionary, create a probability of that word being in insincere questions and its

probability insincere questions. Then finding the conditional probability to use in naive Bayes classifier.

Step 3: Prediction using conditional probabilities. Step 4: End.

#### **PROGRAM:**

} PFIA=float(input("Enter probability that it is Friday and that a student is absent="))
PF=float(input(" probability that it is Friday="))
PADE\_PEIA\_(PE)

PABF=PFIA / PF

print("probability that a student is absent given that today is Friday using conditional probabilities=",PABF)

#### **OUTPUT:**

Enter probability that it is Friday and that a student is absent=0.03 probability that it is Friday= 0.2 probability that a student is absent given that today is Friday using conditional probabilities=

0.15

## LAB EXPERIMENT 2

#### **OBJECTIVE:**

#### Extract the data from database using python

#### **ALGORITHM:**

Step 1: Connect to MySQL from Python
Step 2: Define a SQL SELECT Query
Step 3: Get Cursor Object from Connection
Step 4: Execute the SELECT query using execute() method
Step 5: Extract all rows from a result
Step 6: Iterate each row
Step 7: Close the cursor object and database connection object
Step 8: End.

#### PROCEDURE CREATING A DATABASE IN MYSQL AS FOLLOWS: CREATE DATABASE myDB; SHOW DATABASES; USE myDB CREATE TABLE MyGuests (id INT, name VARCHAR(20), email VARCHAR(20)); SHOW TABLES; INSERT INTO MyGuests (id,name,email) VALUES(1,"sairam","xyz@abc.com"); ... SELECT \* FROM authors; We need to install mysql-connector to connect Python with MySQL. You can use the below command to install this in your system. pip install mysql-connector-python-rf

#### **PYTHON SOURCE CODE:**

import mysql.connector mydb = mysql.connector.connect( host="localhost", user="root", password="", database="myDB"

) mycursor = mydb.cursor() mycursor.execute("SELECT \* FROM MyGuests") myresult = mycursor.fetchall() for x in myresult: print(x)

## Extracting data from Excel sheet using Python

Step1: First convert dataset present in excel to CSV file using online resources, then execute
following
program:
consider dataset excel consists of 14 input columns and 3 output columns (C1, C2, C3)as
follows:
Python Souce Code:
import pandas as pd
dataset=pd.read\_csv("Mul\_Label\_Dataset.csv", delimiter=',')
print(dataset) #Print entire dataset
X =

dataset[['Send','call','DC','IFMSCV','MSCV','BA','MBZ','TxO','RS','CA','AL','IFWL','WWL','
FWL']].values
Y = dataset[['C1','C2','C3']].values
print(Y) #Prints output values
print(X) #Prints intput values
X1 = dataset[['Send','call','DC','IFMSCV','MSCV']].values
print(X1) #Prints first 5 columns of intput values
print(X[0:5]) # Prints only first 5 rows of input values
OUTPUT SCREENS:
Excel Exerct: CSV

Excel Format: CSV

#### LAB EXPERIMENT 3

#### **OBJECTIVE:**

#### Implement k-nearest neighbours classification using python

#### **ALGORITHM:**

Step 1: Load the data Step 2: Initialize the value of k Step 3: For getting the predicted class, iterate from 1 to total number of training data points i) Calculate the distance between test data and each row of training data. Here we will use Euclidean distance as our distance metric since it's the most popular method. The other metrics that can be used are Chebyshev, cosine, etc. ii) Sort the calculated distances in ascending order based on distance values 3. Get top k rows from the sorted array iii) Get the most frequent class of these rows i.e. Get the labels of the selected K entries iv) Return the predicted class If regression, return the mean of the K labels classification, return the mode of the K labels If regression, return the mean of the K labels If classification, return the mode of the K labels Step 4: End. **PROGRAM** import numpy as np from sklearn import datasets iris = datasets.load\_iris() data = iris.data labels = iris.target for i in [0, 79, 99, 101]:

print(f"index: {i:3}, features: {data[i]}, label: {labels[i]}")

np.random.seed(42)

indices = np.random.permutation(len(data))

 $n_{training_samples} = 12$ 

learn data = data[indices[:-n training samples]] learn\_labels = labels[indices[:-n\_training\_samples]]

test\_data = data[indices[-n\_training\_samples:]] test\_labels = labels[indices[-n\_training\_samples:]] print("The first samples of our learn set:") print(f"{'index':7s}{'data':20s}{'label':3s}") for i in range(5): print(f"{i:4d} {learn\_data[i]} {learn\_labels[i]:3}") print("The first samples of our test set:") print(f"{'index':7s}{'data':20s}{'label':3s}") for i in range(5): print(f"{i:4d} {learn\_data[i]} {learn\_labels[i]:3}")

#The following code is only necessary to visualize the data of our learnset import matplotlib.pyplot as plt from mpl toolkits.mplot3d import Axes3D colours = ("r", "b") X = []for iclass in range(3): X.append([[], [], []]) for i in range(len(learn\_data)): if learn\_labels[i] == iclass: X[iclass][0].append(learn data[i][0]) X[iclass][1].append(learn\_data[i][1]) X[iclass][2].append(sum(learn\_data[i][2:])) colours = ("r", "g", "y") fig = plt.figure() ax = fig.add\_subplot(111, projection='3d') for iclass in range(3): ax.scatter(X[iclass][0], X[iclass][1], X[iclass][2], c=colours[iclass]) plt.show() #----def distance(instance1, instance2): """ Calculates the Eucledian distance between two instances""" return np.linalg.norm(np.subtract(instance1, instance2)) def get\_neighbors(training\_set, labels, test\_instance, k, distance): ..... get\_neighors calculates a list of the k nearest neighbors of an instance 'test instance'. The function returns a list of k 3-tuples. Each 3-tuples consists of (index, dist, label) ..... distances = [] for index in range(len(training set)): dist = distance(test\_instance, training\_set[index]) distances.append((training set[index], dist, labels[index])) distances.sort(key=lambda x: x[1]) neighbors = distances[:k] return neighbors for i in range(5): neighbors = get neighbors(learn data, learn labels, test data[i], 3, distance=distance) print("Index: ",i,'\n', "Testset Data: ",test\_data[i],'\n', "Testset Label: ",test labels[i],'\n', "Neighbors: ",neighbors,'\n')

#### LAB EXPERIMENT 6

#### **OBJECTIVE:**

Implement Naive Bayes Theorem to Classify the English Text using python

The Naive Bayes algorithm

**Bayes' Theorem** 

feature matrix

response/target vector

Feature matrix

**Response/target vector** 

dependent features

d X = (x1,x2,x2, xd).

class/group variable each

row of feature

matrix.

Now the "naïve" conditional independence assumptions come into play: assume that all features

in X are mutually independent, conditional on the category y:

Dealing with text data

```
from sklearn.feature_extraction.text import CountVectorizer
corpus = [
    'This is the first document.',
    'This document is the second document.',
    'And this is the third one.',
'Is this the first document?',
1
vectorizer = CountVectorizer()
X = vectorizer.fit_transform(corpus)
print(vectorizer.get_feature_names())
['and', 'document', 'first', 'is', 'one', 'second', 'the', 'third',
'this']
print(X.toarray())
[[0 1 1 1 0 0 1 0 1]
[020101101]
[100110111]
 [0 1 1 1 0 0 1 0 1]
```

The values 0,1,2, encode the frequency of a word that appeared in the initial text data.

E.g [0 1 1 1 0 0 1 0 1] unique vocabulary ['and', 'document', 'first', 'is', 'one', 'second', 'the', 'third', 'this'],

make\_pipeline

using the transformed data

## LAB EXPERIMENT 7

## **OBJECTIVE:**

#### Implement an algorithm to demonstrate the significance of Genetic Algorithm in python

#### **ALGORITHM:**

1. Individual in population compete for resources and mate

2. Those individuals who are successful (fittest) then mate to create more offspring than others

3. Genes from "fittest" parent propagate throughout the generation, that is sometimes parents create

offspring which is better than either parent.

4. Thus each successive generation is more suited for their environment.

## **Operators of Genetic Algorithms**

Once the initial generation is created, the algorithm evolve the generation using following operators –

**1) Selection Operator:** The idea is to give preference to the individuals with good fitness scores and allow

them to pass there genes to the successive generations.

**2)** Crossover Operator: This represents mating between individuals. Two individuals are selected using

selection operator and crossover sites are chosen randomly. Then the genes at these crossover sites are

exchanged thus creating a completely new individual (offspring).

3) Mutation Operator: The key idea is to insert random genes in offspring to maintain the diversity in

population to avoid the premature convergence.

Given a target string, the goal is to produce target string starting from a random string of the same length. In

the following implementation, following analogies are made -

Characters A-Z, a-z, 0-9 and other special symbols are considered as genes

A string generated by these character is considered as chromosome/solution/Individual **Fitness score** is the number of characters which differ from characters in target string at a particular index. So

individual having lower fitness value is given more preference.

#### Source Code

```
# Python3 program to create target string, starting from
# random string using Genetic Algorithm
import random
# Number of individuals in each generation
POPULATION_SIZE = 100
# Valid genes
GENES = "abcdefghijklmnopqrstuvwxyzABCDEFGHIJKLMNOP

## LAB EXPERIMENT 8

#### **OBJECTIVE:**

#### Implement an algorithm to demonstrate Back Propagation Algorithm in python

#### **ALGORITHM:**

It is the most widely used algorithm for training artificial neural networks.

In the simplest scenario, the architecture of a neural network consists of some sequential layers, where the

layer numbered *i* is connected to the layer numbered i+1. The layers can be classified into 3 classes:

- 1. Input
- 2. Hidden
- 3. Output

Usually, each neuron in the hidden layer uses an activation function like sigmoid or rectified linear unit

(ReLU). This helps to capture the non-linear relationship between the inputs and their outputs. The neurons in the output layer also use activation functions like sigmoid (for regression) or SoftMax (for

classification).

To train a neural network, there are 2 passes (phases):

Forward

Backward

The forward and backward phases are repeated from some epochs. In each epoch, the following occurs:

1. The inputs are propagated from the input to the output layer.

2. The network error is calculated.

**3.** The error is propagated from the output layer to the input layer.

Knowing that there's an error, what should we do? We should minimize it. To minimize network error, we

must change something in the network. Remember that the only parameters we can change are the weights

and biases. We can try different weights and biases, and then test our network.

#### **Source Code:**
