 StellaSwap

 Chainlink

 Biconomy

 SubQuery

The Bear Necessities Hackathon by Moonbeam, Multichain & AWS encourages building with core Web3 infrastructure. It offers a fun, competitive, and rewarding environment to explore Moonbeam's interoperable features and create cross-chain connected applications.

Your Project Must Include

At least some smart contract logic deployed to Moonbeam or Moonbase Alpha. Moonbase Alpha is the Moonbeam TestNet.

A link to your publicly accessible GitHub Repository.

Instructions in your ReadMe for how to run your project.

Grand Prizes

2 winners of
\$7,500 each

1 winner of
\$5,000

Registration Ends on:
5th July, 2023
